

Oscilador armónico III

$$\begin{aligned} a^+ |\phi_n\rangle &= \sqrt{n+1} |\phi_{n+1}\rangle \\ a |\phi_n\rangle &= \sqrt{n} |\phi_{n-1}\rangle \end{aligned}$$

$$\begin{aligned} X &= \frac{1}{\sqrt{2}} \sqrt{\frac{\hbar}{m\omega}} (a + a^+) \\ P &= \frac{i}{\sqrt{2}} \sqrt{m\omega\hbar} (a - a^+) \end{aligned}$$

¿Cuál es la representación matricial de a y a^+ ?

$$\begin{aligned} (a)_{nm} &= \langle \phi_n | a | \phi_m \rangle = \sqrt{m} \langle \phi_n | \phi_{m-1} \rangle = \sqrt{m} \delta_{n,m-1} \\ (a^+)_{nm} &= \sqrt{m+1} \delta_{n,m+1} \end{aligned}$$

$$(a) = \begin{pmatrix} 0 & \sqrt{1} & & \\ & 0 & \sqrt{2} & 0 \\ & & 0 & \sqrt{3} \\ & & & \ddots \end{pmatrix} \quad (a^+) = \begin{pmatrix} 0 & & & \\ \sqrt{1} & 0 & & 0 \\ & \sqrt{2} & 0 & \\ & & 0 & \sqrt{3} \\ & & & \ddots \end{pmatrix}$$

$$(X) = \sqrt{\frac{\hbar}{2m\omega}} (a + a^+) = \sqrt{\frac{\hbar}{2m\omega}} \begin{pmatrix} 0 & \sqrt{1} & & \\ \sqrt{1} & 0 & \sqrt{2} & \\ & \sqrt{2} & 0 & \sqrt{3} \\ & & \sqrt{3} & 0 \\ & & & \ddots \end{pmatrix}$$

(P) es similar.

$$\begin{aligned} \langle \phi_n | X | \phi_m \rangle &= \sqrt{\frac{\hbar}{2m\omega}} (\sqrt{m+1} \delta_{n,m+1} + \sqrt{m} \delta_{n,m-1}) \\ \langle \phi_n | P | \phi_m \rangle &= i \sqrt{\frac{m\omega\hbar}{2}} (\sqrt{m+1} \delta_{n,m+1} - \sqrt{m} \delta_{n,m-1}) \end{aligned}$$

Otra forma de escribir a y a^+

$$a = \sum_{n=0}^{\infty} \sqrt{n} |\phi_{n-1}\rangle \langle \phi_n|$$

$$\begin{aligned} a |\phi_n\rangle &= \sum_m \sqrt{m} |\phi_{m-1}\rangle \underbrace{\langle \phi_m | \phi_n \rangle}_{\delta_{mn}} \\ &= \sqrt{n-1} |\phi_{n-1}\rangle \end{aligned}$$

$$a^+ = \sum_{n=0}^{\infty} \sqrt{n+1} |n+1\rangle \langle n|$$

$$\begin{aligned} a^+ |\phi_n\rangle &= \sqrt{n+1} |\phi_{n+1}\rangle \\ a |\phi_n\rangle &= \sqrt{n} |\phi_{n-1}\rangle \end{aligned}$$

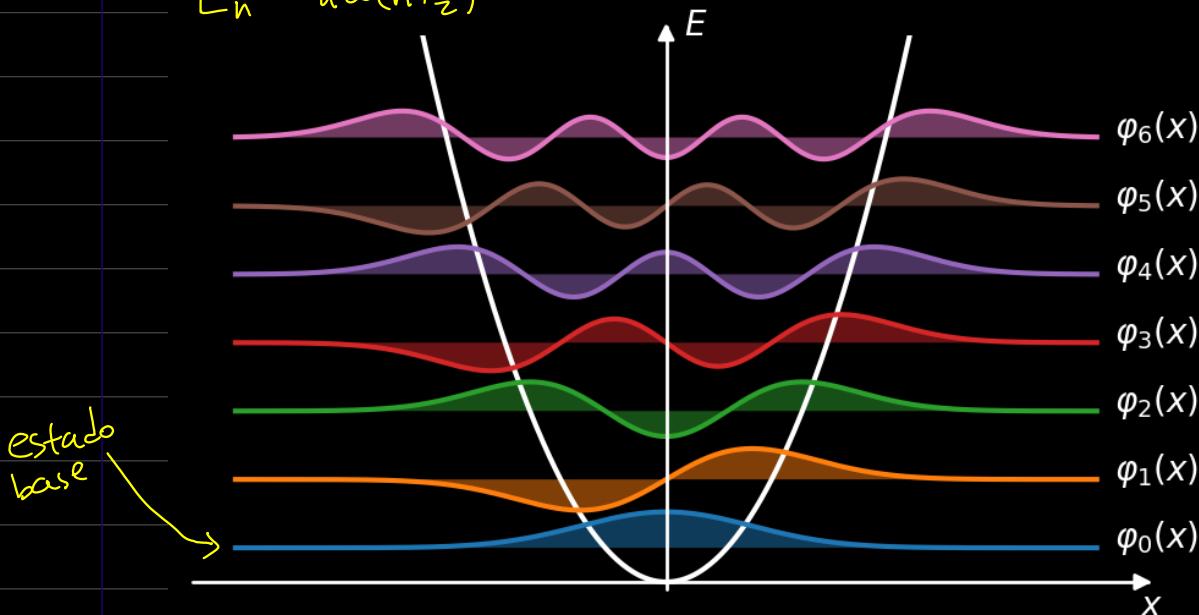

Funciones de onda

$$\langle x | \phi_0 \rangle = \phi_0(x) = \left(\frac{m\omega}{\hbar\pi}\right)^{1/4} e^{-\frac{i m \omega}{2 \hbar \pi} x^2} \quad \left(\begin{array}{l} \text{(la sacamos usando)} \\ \langle \alpha | \phi_0 \rangle = 0 \end{array} \right)$$

$$|\phi_n\rangle = \frac{1}{\sqrt{n!}} (a^+)^n |\phi_0\rangle$$

$$\phi_n(x) = \frac{1}{\sqrt{n!}} \frac{1}{\sqrt{2^n}} \left(\sqrt{\frac{m\omega}{\hbar\pi}} x - \sqrt{\frac{\hbar\pi}{m\omega}} \frac{d}{dx} \right)^n \phi_0(x)$$

$$E_n = \hbar\omega(n + \frac{1}{2})$$

- Si n aumenta:

- Hay más ceros en $\phi_n(x)$

$$\frac{1}{2m} \langle p^2 \rangle = - \frac{\hbar^2}{2m} \int_{-\infty}^{\infty} \phi_n^*(x) \frac{d^2}{dx^2} \phi_n(x) dx$$

- En los extremos hay mayor probabilidad que en el centro

- La función de onda se extiende más en el espacio.

¿Qué obtenemos al medir X o P de un estado propio de H ?

$$[X, H] \neq 0 \quad [P, H] \neq 0$$

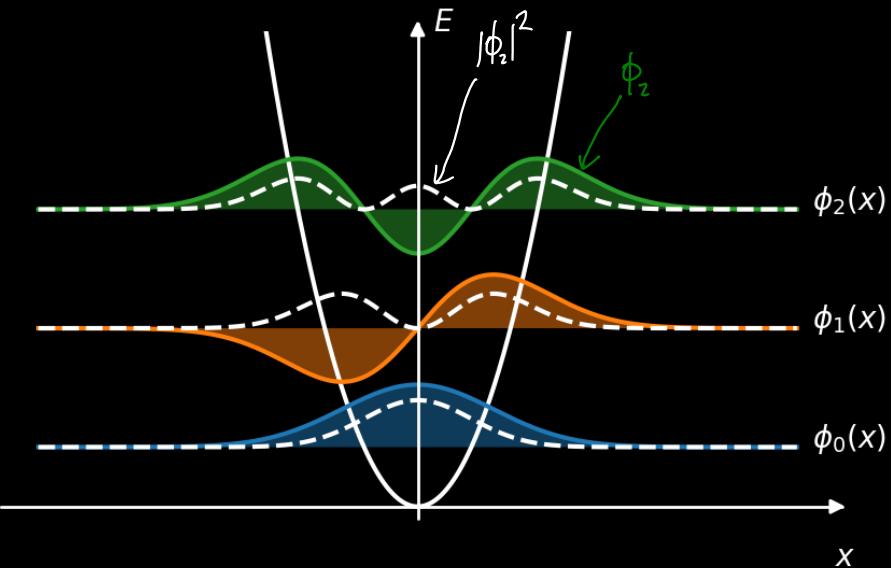

$$\left[X, \frac{p^2}{2m} + \frac{1}{2} m \omega^2 X^2 \right] = \left[X, \frac{p^2}{2m} \right] \stackrel{[X, X^2] = 0}{=} \neq 0$$

\Rightarrow Si el sistema está en un e-estado de H , el valor de X o P que obtenemos al medirlos es aleatorio. Podemos obtener cualquier resultado (con probabilidades pesadas por $|\phi_n(x)|^2$).

En promedio:

$$\langle X \rangle = \langle \phi_n | X | \phi_n \rangle = \sqrt{\frac{\hbar}{2m\omega}} \langle \phi_n | a + a^\dagger | \phi_n \rangle = 0$$

$$\langle P \rangle = \langle \phi_n | P | \phi_n \rangle = i\sqrt{\frac{m\omega}{2}} \langle \phi_n | a - a^\dagger | \phi_n \rangle = 0$$

¿Qué tan dispersas salen las mediciones?

$$\Delta X^2 = \langle \phi_n | X^2 | \phi_n \rangle - (\langle \phi_n | X | \phi_n \rangle)^2 = \langle \phi_n | X^2 | \phi_n \rangle$$

$$\Delta P^2 = \dots = \langle \phi_n | P^2 | \phi_n \rangle$$

$$aa^\dagger = 1 + a^\dagger a \quad N = a^\dagger a \quad [a, a^\dagger] = 1$$

$$X^2 = \frac{\hbar}{2m\omega} (a + a^\dagger)(a + a^\dagger) = \frac{\hbar}{2m\omega} (a^{+2} + a a^\dagger + a^\dagger a + a^2)$$

$$\begin{aligned} \langle \phi_n | X^2 | \phi_n \rangle &= \frac{\hbar}{2m\omega} \langle \phi_n | a^{+2} + a a^\dagger + a^\dagger a + a^2 | \phi_n \rangle \\ &= \frac{\hbar}{2m\omega} \langle \phi_n | 2a^\dagger a + 1 | \phi_n \rangle = \frac{\hbar}{2m\omega} (2n+1) = \frac{\hbar}{m\omega} \left(n + \frac{1}{2}\right) \end{aligned}$$

$$\langle \phi_n | P^2 | \phi_n \rangle = \dots = m\hbar\omega \left(n + \frac{1}{2}\right)$$

$$\begin{aligned} \langle H \rangle &= \frac{1}{2m} \langle P^2 \rangle + \frac{1}{2} m\omega^2 \langle X^2 \rangle = \frac{1}{2m} m\hbar\omega \left(n + \frac{1}{2}\right) + \frac{1}{2} m\omega^2 \frac{\hbar}{m\omega} \left(n + \frac{1}{2}\right) \\ &= \hbar\omega \left(n + \frac{1}{2}\right) \end{aligned}$$

Evolución temporal

$$|\psi(0)\rangle = \sum_{n=0}^{\infty} c_n(0) |\phi_n\rangle \quad \text{Condición inicial}$$

$$|\psi(t)\rangle = \sum_{n=0}^{\infty} c_n(0) e^{-\frac{i}{\hbar} E_n t} |\phi_n\rangle = \sum_{n=0}^{\infty} c_n(0) e^{-i\omega(n+\frac{1}{2})t}$$

Para un observable A

$$\langle \psi(t) | A | \psi(t) \rangle = \sum_{n=0}^{\infty} \sum_{m=0}^{\infty} c_m^*(0) c_n(0) A_{mn} e^{i(m-n)\omega t}$$

$\curvearrowleft \langle \phi_m | A | \phi_n \rangle$

\therefore Como $n, m \in \mathbb{Z}^+$ los términos de la suma oscilan con frecuencia ω o sus armónicos.

$$\text{Si } A = X ; \quad X_{mn} = \sqrt{\frac{\hbar}{2m\omega}} (\sqrt{n+1} \delta_{m,n+1} + \sqrt{n} \delta_{m,n-1})$$

$$\langle X \rangle = \begin{pmatrix} 0 & 0 & 0 & \dots \\ 0 & 0 & 0 & \dots \\ 0 & 0 & 0 & \dots \\ \vdots & \vdots & \vdots & \ddots \end{pmatrix}$$

en $\langle X \rangle(t)$

Para $A = X$, no quedan los armónicos y todos los términos oscilan con frecuencia $\pm\omega$.

(P es análogo).

- $|\psi_n\rangle$ es un estado estacionario.
- Para que $\langle x \rangle$ o $\langle p \rangle$ cambien en el tiempo necesitamos una superposición de $|\psi_n\rangle$'s.

Ejemplos concretos.

$$|\psi(0)\rangle = \sum_{n=0}^{\infty} C_n(0) |\phi_n\rangle$$

(1) Si $C_{m_0}(0) = 1$ y $C_n(0) = 0$ para $n \neq m_0$

$$|\psi(0)\rangle = |\phi_{m_0}\rangle \Rightarrow |\psi(t)\rangle = e^{-i\omega(m_0 + \frac{1}{2})t} |\phi_{m_0}\rangle$$

$$\langle \psi(t) | A | \psi(t) \rangle = \langle \phi_{m_0} | e^{+i\omega(m_0 + \frac{1}{2})t} A e^{-i\omega(m_0 + \frac{1}{2})t} |\phi_{m_0}\rangle$$

$$= \langle \phi_{m_0} | A | \phi_{m_0} \rangle$$

(2) Si $|\psi(0)\rangle = \frac{1}{\sqrt{2}} (|\phi_0\rangle + |\phi_1\rangle)$

$$|\psi(t)\rangle = \frac{1}{\sqrt{2}} \left[e^{-i\omega_0^2 t} |\phi_0\rangle + e^{-i\omega_1^2 t} |\phi_1\rangle \right]$$

$$\phi_0(x) = \text{Graph}$$

$$\phi_1(x) = \text{Graph}$$

t_0

t_1

$$\begin{array}{ccc} \text{Graph} & + & \text{Graph} \\ \text{Graph} & = & \text{Graph} \end{array}$$

$$\begin{array}{ccc} \text{Graph} & + & \text{Graph} \\ \text{Graph} & = & \text{Graph} \end{array}$$
